Maryann,

Did it look like this:

Was the waste spilling out because the top surface was not adequately covered?

I believe spillage from these vehicles is a major contributor of roadside litter so it would be good to properly document what you saw.

Peter

Dear Peter I have just travelled from The Blackwater Valley relief Rd., and then on to the A31 up to Chawton in Hampshire .The verges are often a disgrace but in particular outside the Veolia depot near Alton. I did report an incident when I was behind their overfilled lorry spilling its contents onto the verges but they were not very interested .Surely everyone can see the connection between the litter and the number of lorries both large and small with uncovered contents .

Yours MA Sutherland
